PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building and scaling consumer-facing marketplace platforms with JavaScript, TypeScript, React, and Node.js. Currently delivering production features at DubiCars, a high-traffic automotive marketplace, where I lead initiatives across legacy migration to React-based microservices, Core Web Vitals optimization (INP/LCP), authentication redesign, and SSR-to-CSR product conversions. Strong grounding in RESTful API design, PostgreSQL/MongoDB, CI/CD with GitHub Actions, and Agile product engineering. Comfortable owning features end-to-end, collaborating with product, UI/UX, and backend teams, and writing clean, testable, production-ready code. **Currently serving as the AI Ambassador at DubiCars, where I help champion an AI-first culture across the engineering team and lead initiatives to automate internal processes and developer workflows using modern AI tooling and agent architectures.**

PROFESSIONAL EXPERIENCE

Software Engineer | DubiCars

Jul 2025 – Present

Hybrid, Dubai, UAE

- Engineered multiple production modules on a high-traffic automotive marketplace platform, including a one-click ad import flow, private seller onboarding, and the VIP listing package, directly impacting seller acquisition and revenue.
- Led a payment platform migration by integrating Checkout.com as the new primary gateway and adding Tabby (Buy Now, Pay Later) and Apple Pay as additional checkout options, contributing to a ~10% increase in organizational revenue through improved conversion and broader payment coverage.
- Led migration of significant portions of legacy Vanilla JavaScript code into modular React-based microservices, improving scalability, maintainability, and team velocity across the platform.
- Optimized Core Web Vitals (INP, LCP, CLS) on critical user journeys, resolving performance bottlenecks that were impacting SEO rankings and organic traffic.
- Redesigned site-wide authentication by replacing traditional login pages with non-blocking popup modals, improving conversion and reducing friction in the signup funnel.
- Contributed to architectural conversion of SSR pages to CSR-driven solutions, balancing SEO requirements with interactive user experiences.
- Drove site-hygiene initiatives such as refactoring, dead-code removal, and dependency cleanup, improving long-term codebase health and onboarding speed for new engineers.
- Exploring AI agent architectures and prompt engineering patterns to prepare the platform for emerging AI-driven product features.

Software Engineer | 9D Technologies

May 2023 – Jul 2025

Rawalpindi, Pakistan

- Built a responsive web application with React and Node.js that delivered a 25% increase in user engagement and a 45% reduction in page load time through code-splitting, lazy loading, and asset optimization.
- Engineered the backend for a family locator mobile application using Node.js and WebSockets, implementing real-time location sharing and dedicated chat rooms for secure, group-scoped family conversations.
- Designed and shipped a cross-platform desktop VPN application using Electron.js, integrating OpenVPN for secure tunneling and supporting Windows, macOS, and Linux from a single codebase.

- Developed and published a companion Chrome extension for the VPN product, enabling browser-level proxying and quick-toggle controls in sync with the desktop client.
- Performed CASA (Cloud Application Security Assessment) testing on an Android gallery application that integrated Google Drive and Microsoft OneDrive for cloud backup; successfully passed the assessment, clearing the app for restricted OAuth scopes required to access user files.
- Authored detailed technical specifications and acceptance criteria, translating business requirements into engineering deliverables.
- Implemented secure connection handling, credential storage, and auto-update flows, ensuring user privacy and a smooth update experience.

Associate Software Engineer | Status200

Dec 2022 – Jul 2023

Lahore, Pakistan

- Built front-end and back-end features across multiple JavaScript frameworks, integrating REST APIs and contributing to full-stack delivery.
- Authored end-user documentation and training materials that accelerated feature adoption and reduced support load.
- Participated actively in code reviews, helping enforce team coding standards and catching issues before they reached production.
- Used Git and feature-branch workflows to collaborate effectively across distributed development cycles.

Web 3.0 Intern | The Skynth

Aug 2022 – Dec 2022

Remote

- Developed decentralized application (dApp) features on Ethereum, including wallet integration for an NFT project.
- Built UI components in React.js and Next.js, contributing to product surfaces consumed by end users.
- Gained hands-on exposure to Web3 tooling, smart contract interaction patterns, and blockchain-based authentication.

TECHNICAL SKILLS

Frontend: React.js, Next.js, Vue.js, Angular, React Native, Electron.js, Redux, Tailwind CSS, Bootstrap, SASS/LESS, Responsive Design, Cross-Browser Compatibility, Web Performance / Core Web Vitals (INP, LCP, CLS)

Backend: Node.js, Express.js, REST API design, FastAPI, Microservices, SSR & CSR architectures, ORM (Sequelize / Prisma), Chrome Extension APIs

Databases & Caching: PostgreSQL, MySQL, MongoDB, Supabase, Redis, NoSQL

AI & Automation: AI-First Development mindset, Prompt Engineering, AI Agent Architectures, RAG pipelines, familiarity with Google ADK (Agent Development Kit)

No-Code / Workflow Automation: n8n, Make.com (Integromat), Opal

DevOps & CI/CD: Git, GitHub Actions, GitLab CI, CI/CD pipelines, AWS, Cloudflare, Linux (Ubuntu, Kali), Command Line

Cloud & Containers: Docker (working knowledge), Google Cloud Platform (Cloud Run), DigitalOcean, familiarity with cloud-native architectures and container orchestration concepts

Practices: Agile / Scrum, Code Reviews, Test-Driven Development mindset, Clean Code, System Design fundamentals, Documentation

Tools: Jira, Trello, Microsoft Teams, VS Code, Postman

SOFT SKILLS

Core Strengths: Leadership, Effective Communication, Adaptability, Quick Learner, Problem Solving, Client Relationship Management, Time Management

PROJECTS

DubiCars — Automotive Marketplace (Current) • *Production engineering, payments, performance*

Currently building production features on a high-traffic GCC automotive marketplace, contributing to revenue-impacting flows across payments, VIP listings, seller onboarding, and Core Web Vitals.

Live: <https://www.dubicars.com/>

KYC Onboarding Agent • *Streamlit, FastAPI, GCP, RAG*

Built an end-to-end Know-Your-Customer onboarding agent with a retrieval-augmented pipeline over identity documents. Streamlit powers the operator UI, FastAPI serves the agent backend, and the system is deployed on Google Cloud Run for scalable, serverless inference.

Live: <https://kyc-ui-424105745513.asia-southeast1.run.app/>

n8n Workflow Automations • *n8n, custom connectors, webhooks, REST APIs*

Designed and shipped production n8n workflows and a custom connector to automate cross-system business processes. Iterated through versioned releases with fixes for idempotency, retry handling, and reliable cross-service data sync.

Sober House Hub • *React, Vite, PostgreSQL, DigitalOcean, Stripe, CI/CD*

Full-stack marketplace platform for sober living communities. Built the React + Vite frontend on top of a PostgreSQL backend, integrated Stripe for end-to-end payments, and shipped via a CI/CD pipeline on DigitalOcean.

Live: <https://dev.soberhousehub.com/home>

Bolt VPN • *React, Electron.js, Laravel, SQL, Chrome Extension APIs, CI/CD*

Cross-platform consumer VPN product with a React + Electron.js desktop app, a Laravel + SQL backend, and a companion Chrome extension built on Chrome APIs for browser-level proxying. CI/CD pipelines automated builds and releases across platforms.

Live: <https://boltvpn.org/>

Al Khalijia • *React, Vite, PostgreSQL, ORM, CI/CD*

Marketing and commerce web platform built with React + Vite and a PostgreSQL backend modeled through an ORM. Deployments run through an automated CI/CD pipeline for safe, repeatable releases.

Live: <https://khalijiah.com/>

C-Parker — Web3 Marketplace • *React, Web3, wallet integration, smart contract events*

Decentralized marketplace dApp with wallet integration, on-chain event listeners, and real-time UI updates that stay in sync with smart-contract state. Implemented end-user flows for connecting wallets and reacting to live blockchain events.

Live: <https://c-parker-omega.vercel.app/>

ACHIEVEMENTS

- **Marketplace Platform Engineering:** Active contributor to a high-traffic consumer-facing marketplace serving the GCC automotive market, with direct ownership of revenue-impacting features.
- **Payments Modernization:** Led the integration of Checkout.com, Tabby (BNPL), and Apple Pay at DubiCars, contributing to a ~10% lift in organizational revenue through better conversion and broader payment coverage.
- **Performance & Scalability:** Measurable wins on Core Web Vitals (INP/LCP) and 45% load-time reduction on previous projects through bundling, lazy loading, and architectural improvements.
- **Modernization Lead:** Drove migration of legacy JavaScript to a React microservices architecture, improving testability, deployability, and developer experience.
- **AI Ambassador & Initiative Lead:** Spearheaded AI adoption within the engineering team — driving internal training, prompt engineering practices, and agent architecture patterns to keep the team aligned with modern AI-driven development workflows.

EDUCATION

Bachelor of Science in Software Engineering
COMSATS University Islamabad, Abbottabad Campus

2018 – 2022

LANGUAGES

English — Professional Working Proficiency

Urdu — Native / Bilingual Proficiency
